# FairMate SelfCheckIn

FairMate SelfCheckin is an on-site, self-service terminal allowing visitors to register and buy tickets for the event. It serves as an alternative to regular cash registers.

In addition to relieving cashiers, FairMate SelfCheckin also improves the quality and availability of visitor data compared to data processed from written registration forms. Information entered through a FairMate terminal is immediately available for further analysis. FairMate SelfCheckin is hardware independent and is compatible with own tablets, laptops or PCs. In this case, visitors need only still to pay which reduces waiting time at the cashier considerably.

Self-service registration and ticket purchase ✓

High quality visitor data, available immediately ✓

Flexible deployment ✓

Hardware independent ✓

Optical and acoustic feedback ✓
